
Connections

Posted by schaersvoorde - 2010/06/12 09:40

Hi,

I would like to use the wims-wims server connections.

But can't get it working: I've edited the example config files in log/classes/.connections, but I seem to make some very stupid mistake somewhere...

Could anyone provide me some working example config-files for "communication" between two wims servers ?

thanks in advance,
Joke Evers

Hi,

This module is "bugged". I have some tries to fix it on my computer, but many things does not work. In particular, I was able to create a new class (but without some new features) but not to synchronize them.

We can try to fix it. For the files you asked, I have to check ! But I send you by mail some document I have written there is some time ago.

Bernadette

In fact for the two files, the back parameters and the ident parameters must be exchanged.

But I am afraid it is not sufficient. I will look a glance and put on the wimsmodules svn the modifications I try (I don't want to commit them on the wimsdev svn).

```
ident_site=127.0.0.1
ident_desc=yourself
ident_agent=WIMS-webget
ident_protocol=http
ident_password=tata
ident_type=wims
# The address and identifier/password pair for calling back.
back_url=http://192.xxxx/wims/wims.cgi
back_ident=myself
back_password=toto
```

%%%%%

```
ident_site=192.xxxx
ident_desc=myself
ident_agent=WIMS-webget
ident_protocol=http
ident_password=toto
```

```
ident_type=wims
# The address and identifier/password pair for calling back.
back_url=http://127.0.0.1/wims/wims.cgi
```

back_ident=yourself
back_password=tata

Thanks very much !!
I'll give it a try and let you know.
